

Pure design...

absolute **reliability** and performance

Bartech has been a pioneer in the field of **automatic minibars** with the launch of the first automatic open display minibar in 1988.

Since then, our system is known as the most powerful and sophisticated tool to manage hotels' minibar operations and has been selected by the most famous hospitality chains and independent hotels.

How does it work?

- Our in-room minibars are **connected** to each other and to the Bartech server within a network that is **linked** to the hotel's Property Management System.
- Minibars are **automatically unlocked** when guests check in and locked at check-out.
- Our minibar management application **automatically posts minibar charges** to the guest folio on the Property Management System (PMS) and also records the status of all products inside the minibar.
- A **refill report** is provided by the Bartech system for greater **efficiency** to the minibar attendants. Minibar refilling is operated by the hotel staff through means of a **dedicated remote control** that puts the system in a **refilling mode** on a room by room basis.

Our automatic minibars as well as our management software have been **constantly improved** since the creation of the company. Our in-house Research and Development department has been dedicated to many improvements over the years and is constantly enhancing our software in accordance with the **operational needs of our clients**.

The newly integrated features then become our **standard** offering for all to benefit. It is our pride to continually develop system improvements encompassing the **latest technologies** for increased efficiency of your hotel's minibar operation.
